Company Overview

Wishlist

Problem Statement :
How might we convert browse-and-wishlist users into first-time buyers by reducing checkout friction?

About Myntra

Myntra is a company based in Bengaluru, Karnataka, India, operating in the ecommerce sector. **Founded in 2007**, it now employs **12557 individuals**. The company was established by **Ashutosh Lawania, Mukesh Bansal, Vineet Saxena.**

Sources

Myntra Revenue

Myntra reported revenue of **₹6,117.0 Cr in FY25**, an increase of **5.6%** from **FY24 (₹5,794.7 Cr).**

Sources

Corporate Overview & Strategic Positioning

Walmart (Save money. Live better.) → Parent Entity → Flipkart → 2014 Acquisition → Myntra

Business Architecture & Marketplace Operating Model

Third-Party Brands / D2C — *Myntra Managed Marketplace* — *Myntra Logistics* — *Consumers*

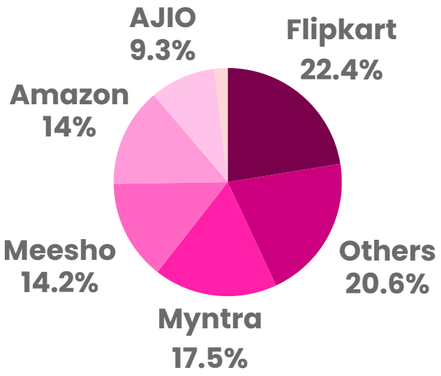

Market Positioning & Core Demographics

meesho ← Value/Discount-Centric → AJIO, Amazon Fashion ← Premium/Lifestyle-Centric → Myntra

Core Verticals & Brands

- **Myntra FWD** — Gen Z-focused fashion with 700K+ trend-led styles at affordable prices.
- **Luxe** — Premium destination for international and designer brands.
- **Beauty & Personal Care** — Cosmetics, skincare, and fragrances from global and D2C brands.
- **Home & Lifestyle** — Home décor, furnishings, and kitchen essentials.
- **Private Labels** — AI-driven in-house brands like Roadster, HRX, Moda Rapido, Dressberry, and Kook N Keech.

Operational Scale & Baseline KPIs

MAU	Brand Catalog	Inventory Depth	Logistics Reach	Network Backbone
75M+	6,000+	1.2M+	19,000+	*Multi-node hub-and-spoke warehousing via Myntra Logistics*
(High engagement driven by Myntra Studio & Glamstream)	*Registered global & domestic brands*	*Registered global & domestic brands*	*Pin codes covered across India*	

Feature Overview

Myntra FWD (Gen-Z App-in-App Experience)

[Social Feeds / Creator Reels] ——► [Swipe-Up "FWD" Portal] ——► [Instant Micro-Trend Checkout]

What	Gen Z-focused, trend-first shopping experience with creator videos and curated collections.	Launched	May 2023; now serves 20M+ users across Tier 1–3 cities.	Purpose	Attract Gen Z, reduce customer acquisition costs, and compete with fast-fashion platforms.	Role	Acts as the top-of-funnel for customer acquisition and personalized trend discovery.

M-Now (Quick-Commerce Ultra-Fast Delivery)

[Urgent / High-Intent Search] ——► [Local Warehouse Check] ——► [30-Min Dark Store Delivery Route]

What	30-minute delivery for curated fashion, beauty, and accessories.	Launched	Dec 2024; expanded from Bengaluru to major metros and Tier 2 cities, reaching 70M+ monthly users.	Purpose	Enable impulse purchases, reduce cart abandonment, and compete in quick commerce.	Role	Integrates with search and checkout for faster order fulfillment.

My Stylist (Generative AI Style & Curation Engine)

[User Image / Text Context Input] ——► [LLM Semantic Inference Engine] ——► [Multi-Item Outfit Bundle Add]

What	AI-powered personal stylist that recommends complete outfits from photos or text prompts.	Launched	May 2023; available to all users with 4.5L+ styles.	Purpose	Reduce choice overload, improve discovery, and increase Average Order Value (AOV).	Role	Integrates with product pages and checkout as a digital shopping assistant.

Myntra Insider (Engagement-Driven Loyalty Framework)

[Interactive Apps Actions / Reviews] ——► [Insider Tier Advancement Ledger] ——► [Frictionless Points Checkout Drop]

What	Tiered loyalty program rewarding purchases, reviews, fit photos, and engagement.	Launched	Sept 2018; now has 35M+ active members.	Purpose	Increase customer retention, encourage quality reviews, and reduce returns.	Role	Strengthens post-purchase engagement through rewards, reviews, and checkout benefits

Primary Research

Survey Overview (n = 50 Respondents)

50
Respondents
From Survey June , 2026

68%
RESPONDENTS GEN Z (18-24)
Core Target Audience

72%
TIER 1 METRO
Mumbai, Delhi, Bangalore

52%
ALREADY BOUGHT
On Myntra at least once

48%
WISHLIST-ONLY
Browse but never bought

36%
USE MYNTRA MOST
Vs 34% Flipkart, 16% Amazon

WHY WISHLIST INSTEAD OF BUY?

Waiting for price drop / sale	48%
Higher budget later	36%
Bookmarking/comparing	26%
Unsure about size / fit	20%
Share with friends first	18%

KEY INSIGHT:
Nearly half of users wishlist purely as a price-watch tool - confirming a Price Lock feature would convert this segment directly.

WHAT STOPS CART MOVEMENT?

Price went up unexpectedly	26%
Size/item sold out	26%
Vague fabric / material info	16%
No real-life photos	16%
Nothing discourages me	16%

KEY INSIGHT:
52% of hesitations are price-triggered (unexpected hike + stock fear). Trust gaps in product info account for another 32%.

CHECKOUT ABANDONMENT REASONS

Hidden platform/delivery fees	26%
Coupon codes confusing	20%
Delivery time too long	18%
Payment method unavailable	16%
Never moved to cart	12%

KEY INSIGHT:
#1 drop-off: Surprise fees at final step confirming Reddit findings from r/Indian Beauty Deals.

Interview Responses

- He prefers Myntra over Meesho and uses the wishlist to track items until prices drop or a sale starts.
- He saves outfits in his wishlist as style inspiration but prefers purchasing similar clothes from local stores due to a lack of trust in online shopping.

- Use a chatbot for initial issue collection, then seamlessly transfer unresolved cases to a live support agent.
- Introduce a prominent "Apply Coupon" button to improve discoverability and encourage coupon usage.

- She saved outfits for future occasions, but due to unavailability or price hikes, she ended up buying from the local market.
- Gen Z loves curating wishlists more than buying saved items often go out of stock or out of trend before purchase.

Competitive Analysis

Legends : Pain Points/Friction | Neutral/Balanced | Strengths/Opportunity

Benchmarking Parameter	Myntra	AJIO	NYKAA	fashion
Core Feature Depth	**Advanced:** Fully deployed AI conversational stylists and hyperlocal M-Now delivery systems.	**Moderate:** Rigid parametric attribute filter structures with limited social commerce features.	**Curated:** Editorial lookbooks and deep integration with community beauty tools.	**Utility-First:** Highly accurate text search text but visually uninspired product grids.
Onboarding UX Friction	**Mandatory** mobile-number OTP wall on first launch interrupts exploration.	**High** initial prompt fatigue due to immediate location and push tracking requests.	Seamless, soft guest onboarding that delays account setup until checkout.	**Low entry friction**; relies on pre-existing global Amazon ecosystem sign-ins.
Retention Mechanic	**Myntra Insider:** Engagement milestones and real-time automated wishlist price drops.	**AJIO Points:** Transaction-heavy cashbacks tied strictly to immediate repeat purchases.	**Prive Loyalty:** Cross-platform tier rewards linked directly with Nykaa Beauty.	**Amazon Prime:** Ecosystem perks like free shipping, rather than fashion-specific styling.

Sources

User Persona 1

Ananya Sharma

The *cautious budget shopper* frustrated by *hidden checkout fees.*

AGE : 22 years old

OCCUPATION : College Student,

LOCATION : Tier 1 City (Delhi)

PRIMARY APP : Flipkart

*"I love curating my wishlist, but it feels like a **bait-and-switch** when a cheap item suddenly costs way more at checkout just because of random platform fees and **sudden tax additions**."*

PERSONALITY

Price-Sensitive | Wishlist-Curator | Hidden-Fee-Averse | Deal-Driven

CORE TRAITS

Goals & Motivations

- Discover trendy, *affordable fashion*
- *Save favorite items* to a wishlist for later
- Find *clear deals* that fit a *strict student budget.*

Pain Points

- Gets frustrated by *hidden taxes* and *last-minute price jumps*
- Dislikes *unexpected ₹20–₹200 convenience fees*
- Annoyed by *cart price hikes* after 30 minutes

Behavioral Habits

- Browses *fashion subreddits* for honest reviews
- Verifies product quality through *community feedback*
- Checks for shared *pricing discrepancies* and hidden charges

THE PRODUCT CONTEXT

Experience Level

- *High digital proficiency*; regular user of *UPI payments* and mobile shopping apps.

Environment

- *Browses casually* on her phone during college breaks, but *abandons her cart* at her desk when hit with *hidden fees*.

User Persona 2

Rahul Verma

The *cautious first-time apparel* buyer *intimidated by rigid return penalties*.

AGE : 24 years old

OCCUPATION : Junior Software Engineer

LOCATION : Tier 1 City (Bangalore)

PRIMARY APP : Amazon Fashion (or Myntra solely for research)

*"**Online sizing is always a gamble**. Why should I take the risk on a first purchase if the platform is going to penalize me or **block my exchange** just for trying to get the right fit?"*

PERSONALITY

Risk-Averse | Fit-Skeptical | Penalty-Wary | Review-Reliant

CORE TRAITS

Goals & Motivations

- Upgrade wardrobe with *reliable, well-fitting clothes*
- *Ensure hassle-free size exchanges*
- *Avoid financial penalties* for returns or exchanges

Pain Points

- Worried about *inaccurate sizing* and *inconsistent reviews*
- Avoids *return penalties* like *frequent-return fees*
- Frustrated by *location-based exchange restrictions*

Behavioral Habits

- Checks *sizing charts* and *customer reviews* carefully
- Researches *refund and exchange experiences* on Reddit and Justdial
- *Verifies customer support* before making a purchase

THE PRODUCT CONTEXT

Experience Level

- Moderate; comfortable buying electronics online but *highly skeptical of buying apparel* online due to *fit uncertainty*.

Environment

- Shops on a *desktop monitor* at his desk after work hours to *carefully inspect clothing details*.

User Persona 3

Priya Patel

The *risk-averse browser* who abandons her wishlist due to *payment and platform uncertainties*.

AGE : 21 years old

OCCUPATION : Undergraduate Student

LOCATION : Tier 1 City (Mumbai)

PRIMARY APP : Ajio or Local/Offline Shopping

*"If a platform makes it **hard to get a real refund**, **changes the price** depending on whether I use UPI or COD, and keeps my platform fees when I cancel, I'd rather just **leave my items in the wishlist forever**."*

PERSONALITY

Security-Conscious | Refund-Anxious | Skeptical-Browser | Friction-Intolerant

CORE TRAITS

Goals & Motivations

- Seeks a *smooth and secure first-time checkout*
- Prefers *hassle-free UPI payments*
- Expects *stable pricing with no surprise charges*

Pain Points

- Worried about *failed deliveries* and *UPI payment issues*
- Dislikes *non-refundable convenience fees* on cancellations
- Fears *refunds being locked as store credits* instead of bank transfers

Behavioral Habits

- Relies on *Reddit and app store reviews* before buying
- Influenced by *reports of poor customer service*
- *Avoids platforms with security concerns*

THE PRODUCT CONTEXT

Experience Level

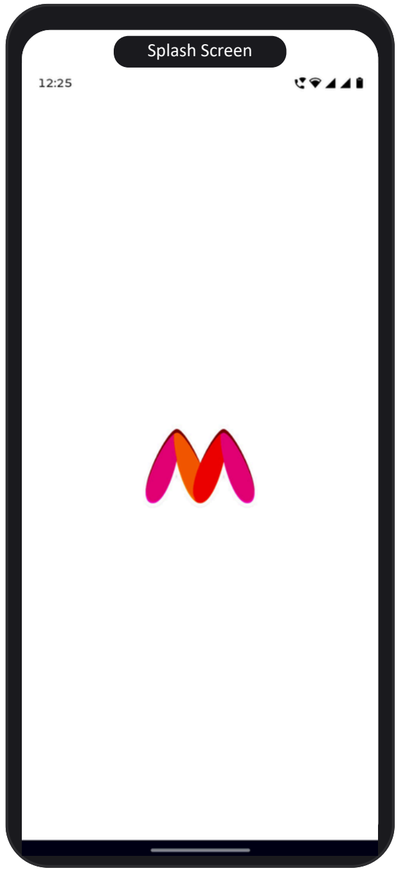

- High smartphone usage, but *very low trust toward platforms* with *complex or unhelpful customer grievance records*.

Environment

- Shifts between mobile shopping on the go and checking the desktop site to *verify final gateway safety*.

User Journey

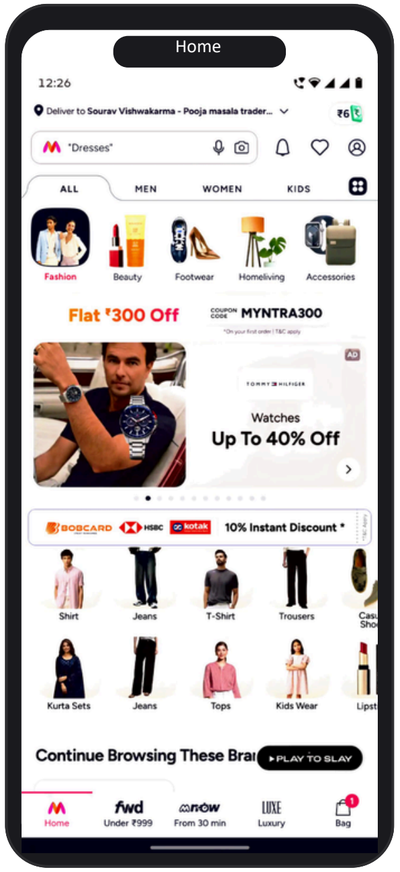

STEP 01

Neutral

Clean logo splash, but no loading animation feels plain vs. Ajio & Amazon.

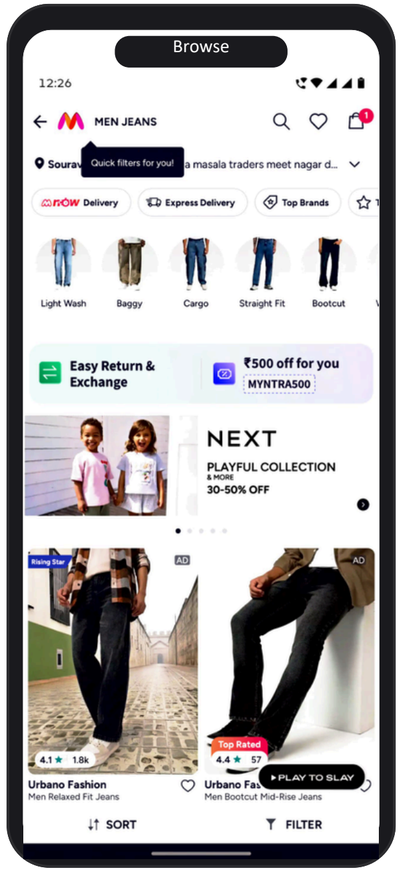

STEP 02

Happy

Rich banners, category pills & first-order coupon visible on first scroll.

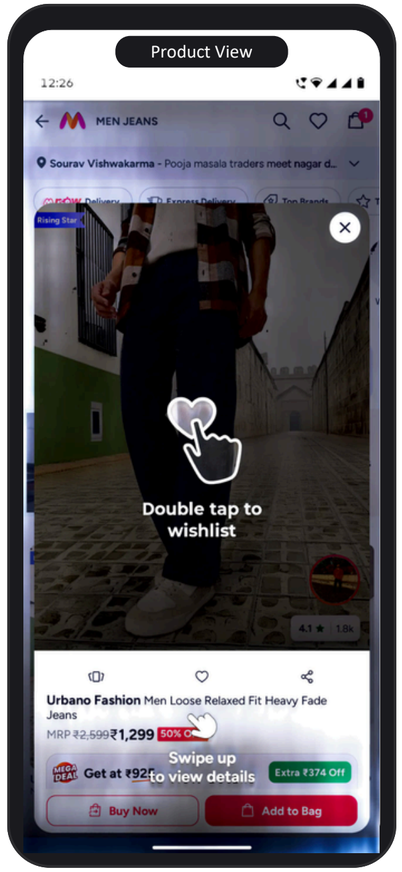

STEP 03

Sl. Happy

Quick sub-filters (Baggy, Cargo, Bootcut) and MNOW chip are great UX wins.

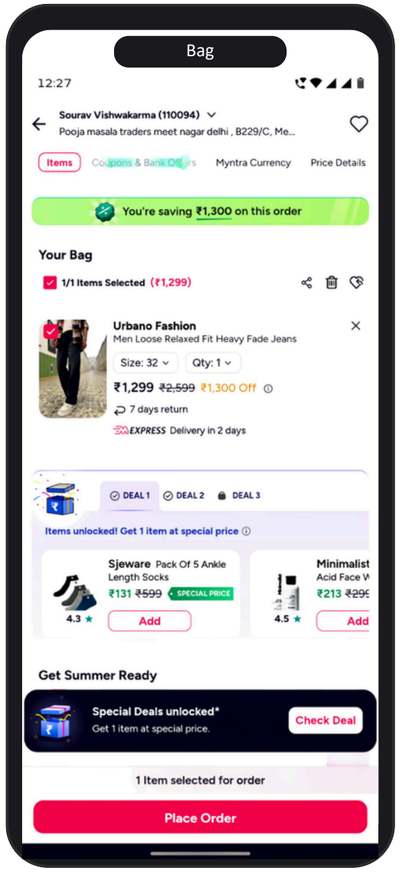

STEP 04

Confused

Double-tap to wishlist is fun but swipe-up gesture confuses first-time users.

STEP 05

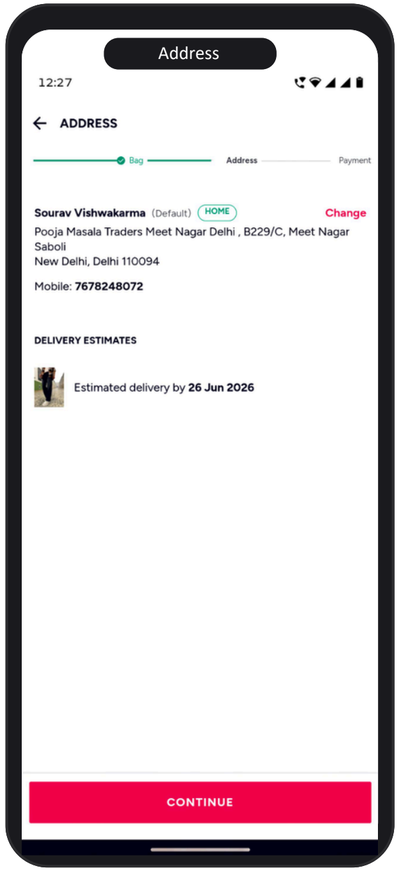

Happy

Savings banner + Special Deals upsell well-placed. COD chip is prominent.

User Journey

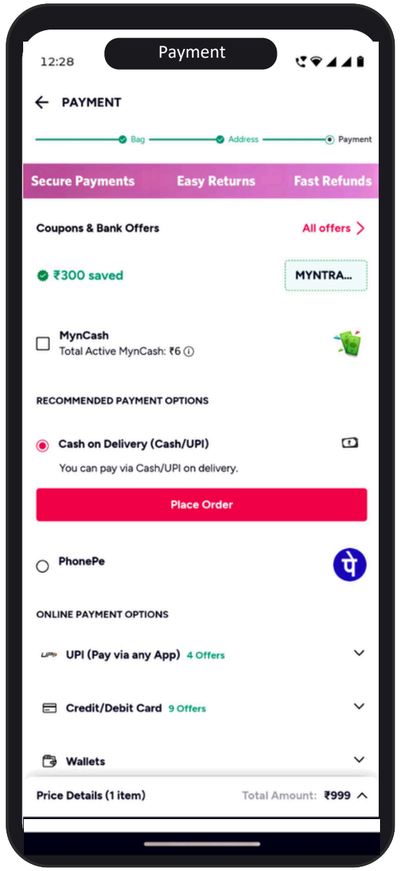

STEP 06

😌 Satisfied

Address auto-filled. Delivery ETA shown at this step. 3-step progress bar is clean.

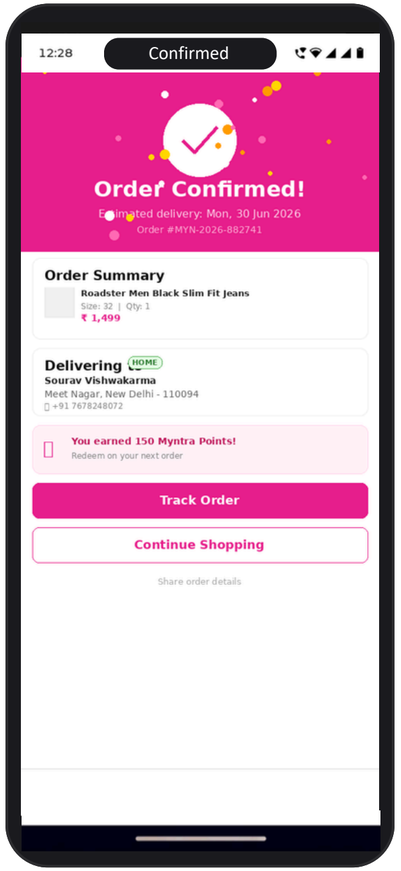

STEP 07

😄 Delighted

Coupon auto-applied saves ₹300. 'Secure Payments' trust badge and fast checkout.

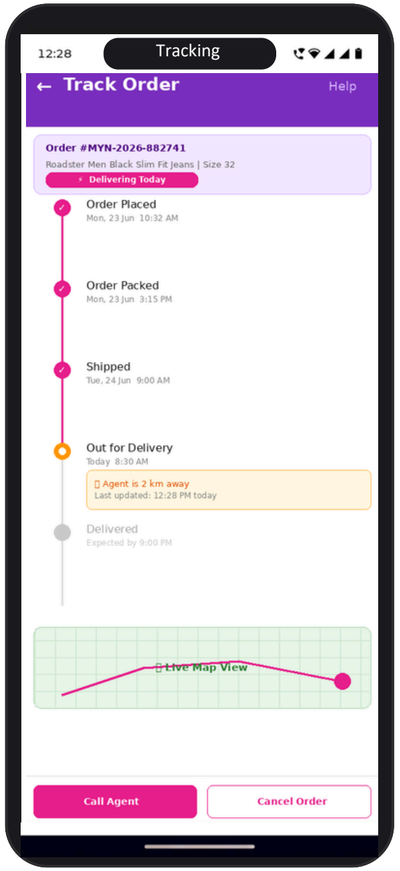

STEP 08

😃 Excited

Confirmation is fast. ETA visible. But no celebration animation — missed delight moment.

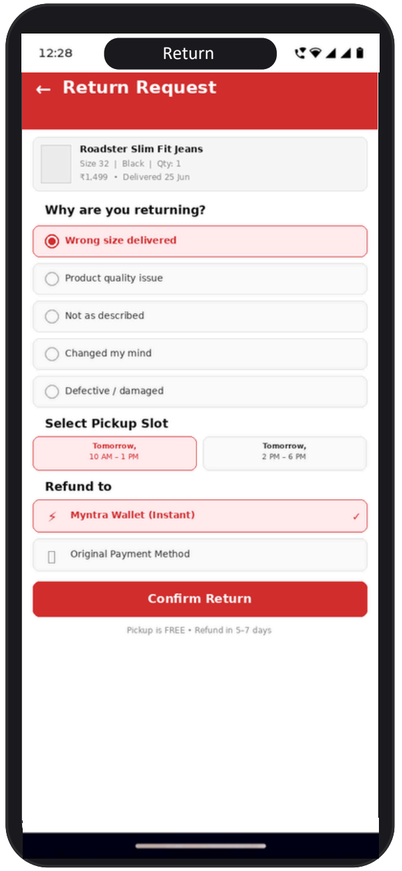

STEP 09

😕 Confused

'Delivering Today' shows daily for 2+ days with no real update. Destroys trust fast.

STEP 10

😡 Angry

Return declined after 10 days, no resolution. 1,999 users flagged this. Biggest trust breaker.

Feature Suggestion

Feature Overview

Metric	24-Hour Price Lock	Virtual Fit Preview	AI Trust Summarizer
What	Freezes wishlist discounts for 24 hours.	Shows garment fit on the user's body shape.	AI-generated trust score + complaint tags from aggregated reviews
How	Locks price in database; displays a countdown timer.	Maps body inputs to a personalized fit avatar.	NLP scans reviews to identify recurring fit and quality themes.
Why	Stops price anxiety; creates immediate urgency.	Reduces size confusion and fit anxiety.	Solves fit & quality concerns.

Trade-Off Matrix

Metric	24-Hour Price Lock	Virtual Fit Preview	AI Trust Summarizer
Impact on Conversion	**High** *(Immediate cart conversion)*	**High** *(removes biggest cited UX confusion)*	**Medium - High** *(closes trust gap pre-checkout)*
Development Effort	**Low - Medium** *(Database table & timer UI)*	**High** *(avatar rendering + fit data mapping)*	**Medium** *(NLP summarization on existing review corpus, no new data collection)*
Operational Risk / Cost	**Medium** *(Margin hit if live prices rise)*	**Medium** *(avoids photo upload, but rendering compute cost)*	**Low-Medium** *(risk of inaccurate summary, needs periodic re-scan)*
Primary Trade-Off	**Urgency vs. Margin:** Drives rapid sales but risks short-term margin dilution.	**Visual Confidence vs. Build Complexity:** solves fit doubt convincingly, but heavier to ship than a text-based sizer	**Trust vs. Liability:** builds pre-purchase confidence fast, but a wrong summary could itself become a trust issue

Change Suggestion

Fixing friction in the existing flow backed by survey data & UX research

Kill the Checkout Shock (Transparent Pricing)

- **The Pain:** Hidden fees ambush users at checkout and vanish forever upon cancellation.
- **The Change:** Display the absolute final price upfront; auto-refund 100% of fees if cancelled pre-shipping.

Eliminates checkout cart abandonment by building instant financial trust and complying with anti-dark-pattern consumer laws.

Punish the Fraud, Not the Fit (Risk-Aware Returns)

- **The Pain:** Users get penalized with "high-return" fees for bad brand sizing and blocked pincodes.
- **The Change:** Waive penalties for size mismatches; flag pincode exchange blocks before purchase.

Boosts customer loyalty but risks skyrocketing supply chain costs if users exploit the size excuse to order multiple sizes to try at home.

My Money, My Account (Original-Method Refunds)

- **The Pain:** Trapping refunds in expiring Myntra Credits feels like a hostage situation.
- **The Change:** Default refunds straight back to the bank; make store credit a strictly optional choice.

Satisfies the user's demand for cash liquidity but destroys Myntra's "walled garden" advantage by allowing capital to leave the ecosystem.

North Star Metric (NSM)

Gross Merchandise Value (GMV) per Active User

Focusing entirely on raw order volume can incentivize low-value, high-return purchases. Tracking GMV per Active User balances conversion rate, order volume, average order value, and return management into a single indicator of health.

L1: Engagement & Funnel Metrics

DAU / MAU Ratio (Stickiness Ratio)

Monitors baseline customer habituation loops and platform stickiness.

First-Purchase Activation Rate

Tracks the speed at which newly registered accounts graduate from open browsing to their first checkout completion.

Wishlist-to-Cart Graduation Rate

Monitors final checkout drops to isolate payment gateway issues or pricing fee friction nodes.

L2: Operational Guardrail Metrics

Return-to-Order Ratio

Tracks return volume against successful checkouts, highlighting size mismatch issues or misleading product photos.

Customer Support CSAT

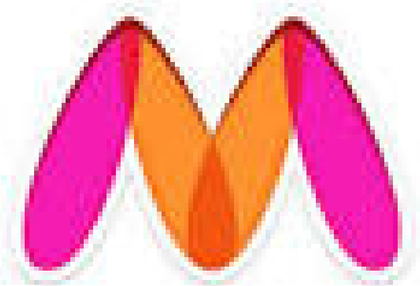

Tracks user satisfaction within support and pickup flows, protecting long-term platform trust

Final Performance Summary Table

Metric Type	Metric Name	Baseline	With 24 hr Price Lock + Price Transparency	Absolute Delta (Δ)
L1 Funnel	First-Purchase Activation Rate	5.00%	**7.00%**	**2.00%**
L1 Funnel	Wishlist-to-Cart Graduation Rate	12.00%	**15.00%**	**3.00%**
L2 Guardrail	Return-to-Order Ratio	30.00%	**30.00%**	**0.0% (*Neutral*)**
NSM	**Net GMV per Active User**	**₹58.46**	**₹74.59**	**+₹16.13 / user**

Guesstimate for NSM

APPENDIX

Appendix

Guesstimate

Total Platform MAU
75,000,000

Isolate into 3 Mutually Exclusive Cohorts (L1)

Non-Buyers(24%)
(Never Purchased Before)
Size: 18,000,000 Users

Active Wishlisters(24%)
(Have Purchased Before + Active Wishlist Items)
Size: 18,000,000 Users

Pure Buyers(52%)
(Browse / Buy directly without Wishlists)
Size: 39,000,000 Users

Baseline Activation: 5% (18M X 0.05 = 900,000 baseline orders)

Price Lock Impact:
The data dictates 30% adoption and 20% conversion.
18M X 30% X 20%
= 1,080,000 raw incremental buyers

Price Transparency Impact:
Total cart fee-shock abandoners are 5.7M, and 40% are first-timers (2.28M). The data dictates a 25% recovery rate.
2,280,000 users X 25% recovery
= 570,000 raw incremental buyers

- Raw new buyers: 1.65 million
- Removed overlapping conversions (users counted only once)
- Applied 45% payment/verification drop-off
- Final verified net incremental buyers: 360,000

$$\text{New Activation Rate} = \frac{(900{,}000\ (\text{Baseline}) + 360{,}000\ (\text{Net Incremental}))}{18{,}000{,}000\ (\text{Cohort Pool})} = 7.0\%$$

Appendix

Guesstimate

Baseline Graduation: 12% → 2.16M orders
Price Lock Impact: +1.08M potential buyers
Price Transparency Impact: +855K potential buyers
After 35% overlap adjustment: +540K net incremental buyers

New Graduation Rate = (2.16M + 540K) ÷ 18M
= 2.70M ÷ 18M
= 15.0%

Quantifying the Final Success Metric (NSM) Increase

Baseline Net Retained GMV
Current Platform Performance
Order Volume
- Cohort A: 900K
- Cohort B: 2.16M
- Cohort C: 2.16M
- Total Orders: 5.22M

Gross GMV
- 5.22M × ₹1,200 = ₹6.264B

Net Retained GMV
- ₹6.264B × 70% = ₹4.385B

North Star Metric (NSM)
- ₹4.385B ÷ 75M = ₹58.46 / Active User

With 24 hr Price Lock + Price Transparency

New Net Retained GMV
Projected Performance After Feature Rollout
Order Volume
- Cohort A: 1.26M
- Cohort B: 2.70M
- Cohort C: 2.70M
- Total Orders: 6.66M

Gross GMV
- 6.66M × ₹1,200 = ₹7.992B

Net Retained GMV
- ₹7.992B × 70% = ₹5.594B

North Star Metric (NSM)
- ₹5.594B ÷ 75M = ₹74.59 / Active User

Detailed Competitive Analysis

Vector	Myntra	Ajio	Amazon Fashion	Nykaa Fashion
Product Discovery	**Excellent:** AI personalized feeds, dedicated Gen Z and Luxury sub-destinations.	**Good:** Solid category structure, but feeds can feel static.	**Functional:** Search-heavy layout that prioritizes utility over visual lifestyle curation.	**Highly Curated:** Strong focus on boutique labels and style trends.
Personalization	**Advanced:** Deep learning models tailor recommendations to individual browsing history.	**Moderate:** Relies primarily on basic category and brand matching.	**Transactional:** Based on purchase history and general cross-selling data.	**Editorial:** Curation is guided by beauty and fashion editorial trends.
Delivery Experience	**Industry-Leading:** M-Now offers 30-min hyperlocal delivery in major cities.	**Standard:** Multi-day fulfillment turnarounds.	**Highly Reliable:** Fast shipping via Prime, though packaging lacks a premium feel.	**Boutique Style:** Ships in premium packaging, but delivery timelines are often longer.
Pricing Strategy	**Mid to Premium:** Balances competitive pricing with premium brand positioning.	**Value Focus:** Drives high volumes through aggressive, discount-heavy pricing.	**Mass Market:** Highly competitive pricing focused on basic utility and value.	**Premium Focus:** Maintains higher average order values (AOV) with fewer deep discounts.
Loyalty Tiering	**Structured:** Myntra Insider rewards engagement over simple spending.	**Transactional:** Built around basic cashback points and order milestones.	**Ecosystem-Wide:** Powered by Amazon Prime benefits, rather than fashion-specific rewards.	**Cross-Platform:** Tied into the broader Nykaa Beauty reward ecosystem.
Returns & Support	**Seamless:** Instant refunds and reliable automated reverse-logistics.	**Variable:** Return pickups can occasionally experience logistical delays.	**Highly Efficient:** Standardized, friction-free return processing.	**Strict:** Longer verification steps for returns on premium designer labels.
Overall UX Rating	**9/10**: Visually polished, intuitive mobile app experience.	**7/10:** Functional interface, but can suffer from performance lag during sales.	**5/10:** Highly utility-driven layout that lacks a distinct fashion-first identity.	**8/10**: Clean, lifestyle-focused design with an elegant aesthetic.

PRODUCT REQUIREMENT DOCUMENT (PRD)

PRD （For APP)

Project Title: Price Confidence Experience (MVP)

Attribute	Details
Feature	24-Hour Price Lock
UX Change	Transparent All-Inclusive Pricing
Target Platform	Mobile-First Web App (React + Tailwind)
Deployment Environment	Replit Free (Mock Data Only)

1. Overview & Objectives

- The purpose of this project is to build a mobile-first MVP prototype that demonstrates a new shopping experience for Myntra, specifically targeted at solving pricing uncertainty—a primary driver for cart and wishlist abandonment.
- The prototype seamlessly combines two core solutions:
- 24-Hour Price Lock: Users who add an item to their wishlist lock in the current discounted price for exactly 24 hours.
- Transparent All-Inclusive Pricing: Users see the total breakdown (including platform and convenience fees) directly on the product detail page, eliminating checkout-stage price shock.

2. Problem Statement & User Journey

The Problem

Many users utilize the Wishlist feature to save items while waiting for deeper discounts. However, when they return to purchase, they frequently encounter two friction points: unexpected price increases and hidden checkout fees. This results in lost trust and high abandonment rates.

Current vs. Target Flow Comparison

[Current Flow]: Product Page ➔ Wishlist ➔ Wait ➔ Price Multiplies + Hidden Fees ➔ Abandonment [Target Flow]: Product Page ➔ All-Inclusive Price ➔ Wishlist ➔ Price Locked (24h) ➔ Seamless Checkout

3. Core Target Audience

Primary Users: Budget-conscious shoppers (Ages 18–35), deal hunters, and heavy wishlist users.

Secondary Users: First-time buyers and cautious price-comparers.

4. MVP Scope Matrix

To ensure rapid, standalone deployment on Replit Free, the scope is strictly constrained to a single-product simulation.

Appendix

In Scope (Implemented via Local State)	Out of Scope (Strictly Excluded)
• Single Product Interactive Experience	• User Authentication & Accounts (Login/Signup)
• Wishlist functionality with "Price Locked" badge	• Production Backend, Databases, or Live APIs
• Local simulated 24-Hour Countdown Timer	• Real Payment Gateway Integration
• Transparent Price Breakdown UI component	• Push Notifications or SMS Alerts
• Simulated Checkout Flow with Locked Price	• Search Bar & Multi-product Catalog
• "Price Lock Expired" simulation toggle/popup	• Coupon Codes & AI Recommendations

5. Functional Requirements (FR)

FR-1 (Pricing Visibility): The product details page must explicitly display the Original Price, Discounted Price, and the final All-Inclusive Payable Price.

FR-2 (Wishlist Action): Users must be able to add the product to their wishlist, which instantly triggers the "Price Locked" state and redirects them to the Wishlist view.

FR-3 (State Management): The app must save the Locked Price, Lock Timestamp, and Expiry Timestamp locally using React state.

FR-4 (Visual Badging): The Wishlist page must render a distinct 🔒 Price Locked structural status badge on the card.

FR-5 (Countdown Mechanism): The Wishlist must display a dynamic countdown timer (e.g., 23h 59m remaining). This can be simulated on page load.

FR-6 (Checkout Execution): The Checkout page must respect and inherit the locked price if the simulated countdown is active.

FR-7 (Expiration Simulation): The prototype must provide a way to showcase the expired state, forcing the UI to display the updated, higher price along with a fallback popup.

6. Detailed Screen-by-Screen Specifications

Screen 1: Product Details

Visual Elements: Product hero image, Brand label, Product Name, Star Rating (4.5★).

Pricing Component: Cross out MRP, show Discounted Price, display Platform/Delivery fees, and highlight the Final Payable Price with a "What's Included?" tooltip.

CTA: Prominent "Add to Wishlist" button. Tapping this reveals a brief toast notification (✅ Price Locked for 24 Hours) and auto-navigates to Screen 2.

Screen 2: Wishlist View

Visual Elements: Wishlist item card displaying the locked product.

Key Indicators: High-visibility Price Locked Badge and a live countdown timer ticking down from 24 hours.

CTAs: Primary "Buy Now" button and a secondary text button to "Remove" the item.

Appendix

Screen 3: Checkout Experience
Order Summary Breakdown:
Product Price: ₹1,899
Platform Fee: ₹20
Delivery: Free
Final Amount: ₹1,919
Status Card: A dedicated success banner reading 🔒 Locked Price Applied.
CTA: "Proceed to Payment" (ends the prototype flow gracefully upon click).

Screen 4: Price Lock Expired (Popup State)
Trigger: Triggered when simulating timer expiration.
UI Elements: Modal blocking the checkout containing a warning message: Price Lock Expired.
Data Shift: Displays the new live market price: ₹2,149.
CTA: "Continue Shopping" (resets the prototype).

8. UI/UX & Design Style System
The design must look like a premium, modern e-commerce application tailored specifically for mobile form factors. Do not copy official Myntra logos, but honor clean layout structures.
🎨 Color & Styling Guide
Primary Brand Color: #FF3F6C (Vibrant Pink/Red)
Base Background: #FFFFFF
Surface Cards: #F7F7F7
Success States: #16A34A (Green)
Warning/Urgency States: #F59E0B (Amber)
Border Radius System: 16px for cards and primary buttons
Typography: Inter (Soft drop shadows, clean letter-spacing, and highly scannable font weights).

Appendix

9. Implementation Roadmap

Phase 1 [Setup]: Scaffold React + Vite environment, configure Tailwind CSS config, and initialize the client-side router.

Phase 2 [Product View]: Implement ProductPage.jsx alongside the comprehensive, upfront price breakdown component.

Phase 3 [Wishlist & Timer]: Create the Wishlist view layout and hook up the simulated 24-hour countdown utility.

Phase 4 [Checkout Engine]: Build out the checkout view, ensuring state variables correctly carry over the locked value.

Phase 5 [Expiry States & Polish]: Integrate the Expiration Modal toggle overlay and refine responsive mobile spacing.

PRD (For Website)

Build Instruction

You are an expert React UI Engineer.
Build a fully responsive desktop-first shopping website prototype inspired by the shopping journey of Myntra.
IMPORTANT
This is ONLY a UX prototype.
DO NOT build a real ecommerce website.
DO NOT use any backend.
DO NOT use APIs.
DO NOT use Firebase.
DO NOT use Supabase.
DO NOT use authentication.
DO NOT use payment gateway.
DO NOT use database.
Everything must work using local React state only.
The entire project must run on Replit Free with minimum AI credits.
Keep the code simple, reusable and easy to understand.

Tech Stack

Use ONLY
React
Vite
React Router
Tailwind CSS
Lucide React Icons
useState
useEffect
No Redux.
No Context API.
No Zustand.
No TypeScript.
No external UI libraries.
No Framer Motion.
No animation packages.

Purpose

This project demonstrates a UX improvement for online shopping.

Problem:

Users hesitate to purchase because
• prices change after wishlisting
• platform fees appear only during checkout

Solution:

24 Hour Price Lock
Transparent All Inclusive Pricing

Appendix

Design Reference
The UI should be heavily inspired by the screenshots provided.
Do NOT copy Myntra branding.
Instead create an original shopping UI with similar layout.
Replicate the shopping flow.
The page hierarchy should feel almost identical.
Follow these layouts carefully.

Expired State
Simulate timer expiry.
Show modal.
Title
Price Lock Expired
Message
Your reserved price has expired.
Current Price
₹2149
Button
Continue Shopping
If expired
Checkout should automatically use updated price.

Product Page
Layout should resemble Myntra Product Detail page.
Left Side
Large product image
Image gallery thumbnails
Hover zoom effect (simple CSS)
Right Side
Brand
Product Name
Ratings
MRP
Discount
Discounted Price
Platform Fee
Delivery Fee
Final Payable Price
A green information box
✓ Final amount shown upfront
A small tooltip
"What's Included?"
Price Breakdown Card
Example
Product Price ₹1899
Platform Fee ₹20
Delivery Free

Wishlist Page
Should visually resemble Myntra Wishlist.
Each card should contain
Product image
Brand
Product Name
Locked Price
Original Price
Discount
Green Locked Badge
Countdown
Example
🔒 Locked
23h 58m Remaining
Buttons
Buy Now
Remove
If Buy Now clicked
Navigate Checkout

Final
₹1919
Green Badge
🔒 Locked Price Applied
Proceed to Payment button

Checkout Page
Should resemble Myntra Bag page.
Sections
Delivery Address Card
Product Summary Card
Price Details Card
Price Breakdown
Product
₹1899
Platform Fee
₹20
Delivery
FREE

Final Price ₹1919
Buttons
Add to Wishlist
Buy Now
When Add to Wishlist is clicked
Show success toast
🔒 Price Locked for 24 Hours
Automatically navigate to Wishlist.

Appendix

Feature 1

- 24 Hour Price Lock
- When user clicks
- Add to Wishlist
- Store
- lockedPrice
- lockedTime
- expiryTime
- inside React state.
- No backend.
- No local storage required.
- A simulated countdown is enough.

Feature 2

- Transparent Pricing
- Instead of showing
- Product Price
- only
- Show
- Product Price
- Platform Fee
- Delivery Fee
- Final Amount
- directly on Product Page.
- The user should know exactly how much they will pay before entering checkout.
- This is the key UX improvement.

Mock Data

Use one product only.
Brand
Nike
Product
Nike Air Max
MRP
3999
Discount Price
1899
Platform Fee
20
Delivery
Free
Final
1919
Rating
4.5
Use local JSON.

Routing

/
Product Page
/wishlist
Wishlist
/checkout
Checkout

Icons

Use Lucide Icons
Heart
Lock
Clock
Shield
Truck
CheckCircle
Info
ShoppingBag

Folder Structure

src
components
Header
PriceCard
Countdown
Tooltip
ProductCard
PriceBreakdown
StatusBadge
pages
ProductPage
WishlistPage
CheckoutPage
data
product.js
utils
timer.js
App.jsx
main.jsx

Styling

Use Tailwind.
Modern clean shopping UI.
Desktop first.
Responsive.
Rounded cards
rounded-2xl
Soft shadows
Large whitespace
Inter font
Colors
Primary
#FF3F6C
Green
#16A34A
Gray
#F5F5F5
White
#FFFFFF
Border Radius
16px

Countdown

Simulate countdown using useEffect.
Update every second.
Display
23h
59m
58s
No backend timer.

Animations

Use only Tailwind transitions.
No animation libraries.
Hover effects only.

Code Quality

Keep components small.
Maximum 150 lines each.
Avoid duplicate code.
Create reusable cards.
Keep comments minimal.

Appendix

MVP Scope

Include

✓ Product Page
✓ Wishlist
✓ Checkout
✓ Countdown
✓ Locked Badge
✓ Price Breakdown
✓ Expired Modal
✓ Responsive Design

Exclude

Login
Signup
Search
Coupons
Notifications
Payment Gateway
Backend
Database
API
Authentication
Multiple Products
AI
Order History
Reviews
Recommendation Engine

IMPORTANT FOR REPLIT FREE

Since this project is running on Replit Free:
Generate the project incrementally.
Do NOT generate everything at once.
Instead build in phases.
Phase 1
Project setup
Routing
Folder structure
Tailwind
Header
Stop.
Phase 2
Build Product Page
Stop.
Phase 3
Build Wishlist
Stop.
Phase 4
Build Countdown Logic
Stop.
Phase 5
Build Checkout
Stop.
Phase 6
Build Expired Popup
Stop.
Phase 7
Responsive Polish
Stop.
Never regenerate previous files unless necessary.
Only edit files that require changes.
Keep token usage minimal.
